## PERSONAL PROJECTS

Simple article website using HTML, CSS and Javascript

- This is a simple project using HTML, CSS and Javascript.
- It consists of a one page article (on cars) which has a button for navigation menu and on clicking the button the screen rotates about 20 degrees disclosing the navigation menu which consists of home and about options.

Todo list using HTML, CSS and Javascript

- This is a website in which you can add the work you want to do in future and the after completing the work you can delete the todo.
- It uses local storage hence your data does not get deleted after you reload the page.

Pong game using Python

- This is a two player game using the Kivy library of python
- It consists of a screen divided in two parts each having a controllable rectangular bar
- both the users need to protect their sides from the ball using the rectangular bar and if the ball hits the side one point is deducted from the player
- the game continues till a player loses all his/her 5 points

Galaxy Game using python

- It is a game using kivy library of python
- It is similar to various endless runner games. It consists of a triangular ship which the user should keep on white tiles by pressing the left and right keys
- It also has the feature to change maps and difficulties and it also stores the high score made by the player
